Albany Process Belts

Nature has its own way of moving water, and most paper machines are able to handle the water expressed in a shoe press nip naturally with grooved belts. Sometimes, however, they give an uncontrollable volume of nip dewatering, limiting the nip efficiency and compromising machine runnability.

Now, through advances in void engineering, Albany International has created the VentaBelt ev<sup>m</sup>. With the VentaBelt ev<sup>m</sup>, you can have all the benefits of an efficiently vented shoe press nip with total control over nip water sprays.

*VentaBelt is a trade name of Albany International Corp.*
