

Solutions for speed.

TRANSBELT **G5**

Albany Process Belts

Albany International produced the first transfer belt in 1999, enabling high speed closed draw sheet transfer. This development signalled a new era of paper machine design and unprecedented productivity levels to be achieved. Since then, Albany has supplied TransBelts to customers running the fastest machines in the world.

Throughout this time there has been a continual development of the TransBelt as more is understood about the important role it plays in the machine. The new fifth generation "G5" TransBelt is the strongest, most reliable and stable transfer belt ever produced.

TransBelt is a trade name of Albany International Corp.
